

# Housing Needs Report 2020 Village of Hazelton

January 2021

## Land Acknowledgement

This report has been prepared for the Village of Hazelton in the Regional District of Kitimat-Stikine. This Village of Hazelton is located on the traditional, ancestral and unceded territories of the Gitksan and Wet'suwet'en people and includes the Indigenous communities and nations of Gitanmaax, Gitanyow, Gitsegukla, Gitwangak, Hagwilget (Tse-kyá), Kispiox (Anspayaxw), Sik-e-Dakh (Glen Vowell), and Witsset (Moricietown). They have been custodians of this land for thousands of years and we would like to pay our respect to their Elders and knowledge keepers both past and present.

## Introduction

Local governments are required to prepare Housing Needs Reports. This report seeks to provide a better understanding of current and future housing needs in the Upper Skeena region. The information set out in this report is intended to support local planning and decision making, and to provide baseline measures for tracking and reporting on existing and emerging housing needs for the Village of Hazelton.

The findings set out in this report were informed by feedback received through key informant interviews and engagement with key community partners and stakeholders from across the Upper Skeena region.

This report also relies on the collection and analysis of different housing-related measures and indicators gathered from different sources including:

- The 2016 Census
- The 2011 Census and National Household Survey
- The 2006 Census
- BC Housing (Unit Count Report)
- BC Assessment data
- Local housing market information including MLS and other market-related data
- B.C. Stats including population and household projections available through P.E.O.P.L.E. 2020 at the regional district and local health area level

### **Key Findings and Observations:**

As noted in a preliminary housing needs assessment report (2019) prepared by the Storytellers' Foundation for the Skeena Housing Coalition Society, it is recognized that the Upper Skeena region is a unique area located in Electoral Area B that has no identifiable boundaries. Indigenous peoples have lived in the region for thousands of years with the presence of both Settler and Indigenous populations plus unceded First Nations territories and colonial laws resulting in a multitude of jurisdictions and governmental organizations operating in the region. The report goes on to note that the regional heterogeneity makes the area unique but also presents complexities. In undertaking this research and in reflecting on the housing needs of those who live in the Upper Skeena region, it is necessary to take into consideration the multiple viewpoints, perspectives, experiences and needs of those living in this region.

## Population and Household Growth

Population growth can affect housing demand. Statistics Canada, through the Census, provides the most reliable and comprehensive source of baseline and trend data for population and housing demand projections. This includes considerations related to:

- Historical patterns of growth (regional and locally)
- Changes in the general population and age profile of households in a community and region
- Intra-and inter-provincial migration
- Patterns of housing consumption and current housing demand

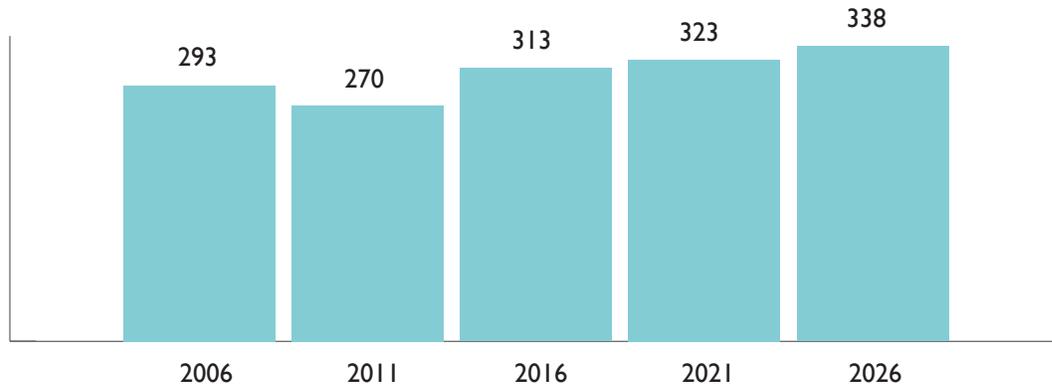

In preparing the population and household projections set out in this report, the following actions were taken:

- The development of a baseline scenario for the Village of Hazelton, the District of New Hazelton and Electoral Area B using information from the 2006, 2011 and 2016 Census
- Analysis of historical patterns of growth as well as an analysis of recent population and household trends
- Consideration of changes in the general social, demographic, and economic profile of households living in the Upper Skeena region
- Consideration of expected population and household growth projections prepared by B.C. Stats (P.E.O.P.L.E. 2020) at the Regional District and Local Health Area level

### The Village of Hazelton

Between 2016 and 2021, it is expected that the Village of Hazelton will grow by 10 people and by a further 15 people between 2021 and 2026. This translates into an increase of 25 people between 2016 and 2026 and represents a population growth rate of 8%.

Source: Statistics Canada 2006, 2011 and 2016 Census and population projections based on P.E.O.P.L.E. 2020 for the Upper Skeena Local Health Area and analysis of historical patterns and trends

Between 2016 and 2021, it is expected that the Village of Hazelton will grow by 18 households with a further increase of 10 households between 2021 and 2026. This translates into an increase of 28 households between 2016 and 2026 and represents a household growth rate of 28%.

# Summary Report

## Village of Hazelton

# Housing Needs Reports – Summary Form

MUNICIPALITY/ELECTORAL AREA/LOCAL TRUST AREA: Village of Hazelton

REGIONAL DISTRICT: Regional District of Kitimat-Stikine

DATE OF REPORT COMPLETION: December 2020

## PART 1: KEY INDICATORS AND INFORMATION

LOCATION	<p><b>Neighbouring Municipalities and Electoral Areas:</b></p> <p>The Village of Hazelton is located in the Regional District of Kitimat-Stikine in the Upper Skeena region. It is located approximately 8 kms to the north of the District of New Hazelton. The Village of Hazelton is located in Electoral Area B which includes the unincorporated communities of Cedarvale, Two Mile, South Hazelton, Kispiox Valley and Kitwanga.</p>
	<p><b>Neighboring First Nations:</b></p> <p>The Village of Hazelton is located on the traditional, ancestral and unceded territory of the Gitksan and Wet'suwet'en peoples and includes proximity to the Indigenous communities and nations of Gitanmaax, Gitanyow, Gitsegukla, Gitwangak, Hagwilget (Tse-kya), Kispiox (Anspayaxw), Sik-e-Dakh (Glen Vowell), and Witsset (Moricetown).</p>

POPULATION	<b>Population:</b> 313		<b>Change since 2006:</b> +6.8%
	<b>Projected population in 5 years:</b> 323		<b>Projected change:</b> +3.1%
	<b>Number of households:</b> 100		<b>Change since 2006:</b> minus 35.5%
	<b>Projected number of households in 5 years:</b> 118		<b>Projected change:</b> +18.0%
	<b>Average household size:</b> 2.0		
	<b>Projected average household size in 5 years:</b> 2.0 (estimated)		
	<b>Median age (local):</b> 48.7	<b>Median age (RD):</b> 40.4	<b>Median age (BC):</b> 42.5
	<b>Projected median age in 5 years:</b> 49.1 (estimated)		
	<b>Seniors 65+ (local):</b> 70 or 22.4 %	<b>Seniors 65+ (RD):</b> 14.9 %	<b>Seniors 65+ (BC):</b> 18.2 %
	<b>Projected seniors 65+ in 5 years:</b> 96 29.7%		
	<b>Owner households:</b> 60 (60%)		<b>Renter households:</b> 35 (35%)
	<b>Renter households in subsidized housing:</b> 6 units of seniors' assisted housing		

INCOME	Median household income	Local	Regional District	BC
	All households	\$66,304	\$ 71,534	\$ 69,979
	Renter households	N/A	\$ 47,005	\$ 45,848
	Owner households	N/A	\$ 81,988	\$ 84,333

The 2016 Census reported 127 households including 60 owners and 35 renters. Custom data purchased by the Province to support the development of Housing Needs Reports shows 100 households including 60 owners and 25 renters. Please note that numbers do not add up to 100 due to random rounding and the challenges related to smaller geographies.

ECONOMY	<b>Participation rate:</b> 63.9%	<b>Unemployment rate:</b> 8.7 %
	<b>Major local industries:</b> The three main industries in the Upper Skeena Region are public administration, tourism and forestry. Many working in the region are employed in various public sector jobs by the municipalities, local band governments, the School District and Wrinch Memorial Hospital. Tourism is a key driver in the Upper Skeena Region, with citizens employed in cultural and historical tourism, and outdoor recreation tourism, especially in hunting and fishing guiding. Forestry also remains a key employer in the region, with residents employed by both local forestry companies and in provincial forest management.	

HOUSING	<b>Median assessed housing values:</b> \$162,450	<b>Median housing sale price:</b> \$205,500
	<b>Average monthly rent:</b> \$773	<b>Rental vacancy rate:</b> N/A
	<b>Housing units—total:</b> 100	<b>Housing units—subsidized housing:</b> 6
	<b>Annual registered new homes:</b> N/A	<b>Annual registered new homes—rental:</b> N/A
	<b>Households below affordability standards (spending 30%+ of income on shelter):</b> N/A	
	<b>Households below adequacy standards (in dwellings requiring major repairs):</b> 35 or 35.0%	
	<b>Households below suitability standards (in overcrowded dwellings):</b> N/A	

**Briefly summarize the following:**

**1. Housing policies in local official community plans and regional growth strategies (if applicable):**

In July 2019, the Village of Hazelton adopted a Strategic Plan which focused on creating a sustainable community that includes increasing economic development opportunities in the downtown core as well as ensuring that appropriate housing choices are available. The Plan notes that with limited geographic area for expansion, the Village of Hazelton will focus on exploring opportunities to promote secondary suites and mixed-use buildings within its boundaries.

**2. Any community consultation undertaken during development of the housing needs report:**

The community consultation process included a series of key informant interviews with community partners and stakeholders from across the Upper Skeena region. The key informant interviews included engagement with municipal staff in the Village of Hazelton and the District of New Hazelton, representatives from the real estate and housing finance sector and key community partners including the Skeena Housing Coalition Society.

An on-line and paper survey was created and was available at the local municipal offices. However, there was only a limited number of responses received (less than 5) from across the region. It is likely that the geographic diversity of the region combined with the distance between communities contributed to the low response rate.

To address this limitation and invite a range of perspectives and insights from across the region, the Skeena Housing Coalition Society convened a meeting of their Board of Directors to review the preliminary findings and to offer their insights as to possible areas for consideration. The Skeena Housing Coalition was established to work together across the Upper Skeena region to create a coordinated, multi-agency response to improve housing conditions for residents living in the region.

Through its work in collaboration with others including working to build partnerships across all levels of government (Federal, Provincial, regional, local and First Nations), a central focus of the Skeena Housing Coalition Society is to leverage the resources, investments and expertise needed to effectively respond to the existing and emerging housing needs for families and individuals in the Upper Skeena region.

**3. Any consultation undertaken with persons, organizations and authorities (e.g. local governments, health authorities, and the provincial and federal governments and their agencies):**

Interviews were completed with administrative staff from the Village of Hazelton, the District of New Hazelton and planning staff in the RDKS. Interviews were also completed with representatives from the Northern Health Authority as well as housing development consultants working with BC Housing in the delivery of current Federal/Provincial housing supply initiatives.

**4. Any consultation undertaken with First Nations:**

Efforts were made but there was only a limited response. Additional engagement with key First Nations partners and Indigenous community partners and organizations was accomplished through engagement with the Skeena Housing Coalition Society which includes First Nations membership on their Board of Directors. There is also additional follow-up research and engagement planned with a focus on understanding the particular needs of Indigenous communities in the Upper Skeena region.

## PART 2: KEY FINDINGS

**Table 1: Estimated number of units needed, by type (# of bedrooms)**

	Currently		Anticipated (5 years)	
	Count	Percentage	Count	Percentage
0 bedrooms (bachelor)	--	0%	5	4.2%
1-bedroom	0	0%	10	8.5%
2-bedroom	25	25%	28	23.7%
3+ bedroom	65	65%	65	55.1%
Total	100	100%	118	100.0%

**Comments:**

Population and household projections through P.E.O.P.L.E. 2020 estimate that the Village of Hazelton is expected to grow by 28 households between 2016 and 2026. This includes an expected increase of 18 households between 2016 and 2021 and an additional 10 households between 2021 and 2026. To respond to this increased demand, the recommended unit mix is focused on increasing the supply of smaller bachelor/studio and 1-bedroom units and is based on recognition that 72.7% of all households in the Upper Skeena region are smaller 1-person and 2-person households while only 38.2% of the housing stock in the region is smaller 1-bedroom and 2-bedroom units. Moreover, with the changing needs of an aging population, it is expected that demand for seniors housing will continue to grow.

**Table 2: Households in Core Housing Need**

	2006		2011		2016	
	#	%	#	%	#	%
<i>All households in planning area</i>	155	100%	95	100%	100	100%
<b>Of which are in core housing need</b>	60	38.7%	N/A	N/A	N/A	N/A
Of which are owner households	20	33.3%	N/A	N/A	N/A	N/A
Of which are renter households	40	66.7%	N/A	N/A	N/A	N/A

**Comments:**

Core housing need is a measure developed by CMHC (Canada Mortgage and Housing Corporation) to identify the number of households who are unable to find housing in their community that is suitable in size and that is in good repair without spending 30% or more of their income on their housing costs. Table 2 provides information on the number of households in the Village of Hazelton in core housing need including the general tenure profile.

Unfortunately, due to the small sample size, information on the number of households in core housing need was not available for the Village of Hazelton in 2011 and 2016. However, data from 2006 Census shows that in 2006 almost 4 in 10 households in the Village of Hazelton were in core housing need, with renter households being twice as likely to be in core housing need when compared to owners.

**Table 3: Households in Extreme Core Housing Need**

	2006		2011		2016	
	#	%	#	%	#	%
<i>All households in planning area</i>	155	100%	95	100%	100	100%
<b>Extreme core housing need</b>	35	22.6%	N/A	N/A	N/A	N/A
Of which are owner households	15	42.9%	N/A	N/A	N/A	N/A
Of which are renter households	20	57.1%	N/A	N/A	N/A	N/A

**Comments:**

Households in extreme housing need are household spending 50% or more of their income on their housing costs and who are at increased risk of homelessness with a decrease in their income or an increase in their rent having the potential to push them into homelessness. As reported above, due to the small sample size and suppression of data, information is not available for households in the Village of Hazelton for 2011 and 2016. However, in 2006 the available data suggests that approximately 1 in 5 households in the Village of Hazelton was in extreme housing need with a greater proportion of these households being renters.

**Briefly summarize current and anticipated needs for each of the following:**

**1. Affordable housing**

There is a significant need for affordable housing at all points along the housing continuum from entry-level ownership choices for young families and individuals living in the Village of Hazelton to an expanded range of rental housing choices (market and non-market).

Priorities identified through the consultation and engagement process included more affordable housing choices for families and individuals wishing to move to the Upper Skeena region for employment as well as those already living in the region. Given constraints in the current supply, it was recognized that to successfully attract and retain key workers, there is the need to ensure that there is an adequate range of housing choices available.

Housing for low-income seniors was also identified as a priority including an expanded range of housing choices to meet the needs of an aging population.

The need for targeted strategies that include both transitional housing and wrap around supports was also identified as a priority with the Upper Skeena region reporting a relatively high level of housing insecurity and homelessness among those living in the region.

**2. Rental housing (market and non-market)**

Through this research, it was evident that there is a critical shortage of affordable rental housing in the Upper Skeena region. In response, there is the need to explore opportunities to increase the supply of purpose-built rental housing as well as expand the inventory and mix of non-market and social housing units across the region.

Based on the research that was completed, it was observed that 85.7% of the rental housing stock in the Village of Hazelton was built before 1980, with a large proportion of this housing being found in the secondary rental market – a less secure, less stable source of housing when compared to purpose-built rental housing.

Through the community consultation process, there was an interest expressed in exploring different housing types and models designed to expand the inventory of rental housing including consideration of different types of mixed income and mixed tenure models. It also includes consideration of coach houses, garden suites and other forms of accessory dwelling units as a way of expanding the inventory of rental housing.

**3. Special needs housing**

Special needs housing typically includes group home units as well as targeted housing strategies with wrap around services. It can also include different types of models that integrate both housing and support as well as ownership or rental housing that has been modified to accommodate specific accessibility or mobility-related needs. Based on information provided through B.C. Housing, there are 6 units of assisted seniors' housing in the Village of Hazelton. This housing will help to respond to the needs of seniors who may require both housing and support as they age.

Based on information from the 2016 Census, there were 10 individuals living in the Village of Hazelton who reported a permanent disability or health and activity limitation, representing 3.2% of the population. At the same time, there were an additional 80 individuals who indicated that they experienced episodic challenges, representing 25.6% of the population. Many of these households will continue to live independently in the community, however some households may require different services and supports as their needs change.

A preliminary housing needs assessment report (2019) prepared by the Storytellers' Foundation for the Skeena Housing Coalition Society also identified the need for 10 to 12 units of housing with services and wrap around supports for individuals with developmental, intellectual, and other types of mental or cognitive conditions including Autism and FASD. Exploration of different types of intergenerational housing and support was also identified as a potential model to be considered within the context of the Upper Skeena region.

#### **4. Housing for seniors**

The Village of Hazelton has a large and growing number of seniors 65 and older including a growing number of older seniors (85 years and older). At the time of the 2016 Census, there were 55 seniors between the ages of 65 and 84 living in the Village of Hazelton with an additional 15 seniors 85 and older. Combined, this represents a total of 70 seniors 65 or older living in the Village of Hazelton or 22.4% of the total population in 2016.

Based on population growth projections prepared by B.C. Stats, it is estimated that the number of seniors 65 and older living in the Village of Hazelton will increase by 26 seniors between 2016 and 2021 with an additional 46 seniors expected between 2021 and 2026. This represents an increase of 72 seniors between 2016 and 2026, or a doubling of the seniors' population in the Village of Hazelton.

To effectively meet the needs of an aging population, there is the need to continue to explore strategies to increase the range of housing choices available to seniors, including a mix of smaller 1-bedroom and 2-bedroom units. It is likely that there will also be the need for more ground-oriented housing that is both adaptable, accessible and that incorporates the principles of universal design. Through the key informant interviews, the observation was also made that there is the need for more supportive seniors' housing and assisted living spaces across the region.

Given the regional context, it is likely that the Village of Hazelton will also experience increased demand from seniors living in the rural areas in Electoral Area B, some of whom may eventually need to downsize and move closer to the types of services and amenities needed to support their on-going independence and healthy aging.

#### **5. Housing for families**

Family households (with and without children) account for almost 65% of all households in the Upper Skeena region. Within the Village of Hazelton, family households accounted for approximately half of all households with the key informant interviews calling for an expanded range of housing choices affordable to single parent family households. As well, the need for an expanded mix of ownership and rental housing was also identified as a priority to support the region in its efforts to attract and retain key workers.

#### **6. Housing for individuals experiencing homelessness**

The preliminary housing needs assessment report (2019) prepared for the Skeena Housing Coalition Society observed that the Upper Skeena region does not have any emergency shelter spaces for men, women, youth, or families and that there is a significant and growing need for shelter spaces and permanent transitional and supportive housing across the Upper Skeena region. It is also worth noting that a temporary shelter was put in place in the Village of Hazelton but it was only intended to be temporary and was not considered to be suitable or appropriate for longer term arrangements. In 2020, the Upper Skeena Housing Coalition Society completed further research which identified 72 families and individuals from across the Upper Skeena region who are without a place to call home. Working together to address the growing homelessness crisis should continue to be an important area of focus for local, regional, provincial and federal partners.

## 7. Any other population groups with specific housing needs identified in the report

The preliminary housing needs assessment report (2019) prepared by the Storytellers' Foundation on behalf of the Skeena Housing Coalition Society documented a diverse range of needs around vulnerable and 'at risk' populations including:

- Housing for vulnerable and 'at risk' youth
- Family housing including housing for single parent family households
- Culturally appropriate housing for Indigenous people
- Housing for people with disabilities (cognitive and physical)
- Housing for women and children fleeing violence
- Housing for low-income seniors and Elders
- Housing for single person households including those receiving income assistance

To meet these needs, consideration should be given to the development of targeted strategies including multi-level partnerships which include partnerships with local housing and service providers as well as partnerships across all levels of government across the Upper Skeena region.

**Were there any other key issues identified through the process of developing your housing needs report?**

## 8. The quality and condition of the existing housing stock

At the time of the 2016 Census, 630 units or 60.3% of the housing stock in the Upper Skeena region was built before 1980. Many of these units are 40 years old or older and could be approaching the end of their useful economic life. In many cases it is likely that this housing will require repairs or replacement. There were 65 units of housing in the Village of Hazelton which were built before 1980 including 85.7% of the rental housing stock in the community.

### Limitations of the Census Data for Smaller Geographies Due to Random Rounding

When working with smaller geographies, it is important to be aware of some of the challenges arising from the practices employed by Statistics Canada in terms of "random rounding" and "data suppression". In the case of random rounding, it is necessary to note that there can be some variability in the numbers reported due to random rounding - an approach adopted by Statistics Canada to ensure confidentiality and that includes randomly rounding either up or down to a multiple of '5' or '10.' In using the data, it is necessary to follow the guidance provided by Statistics Canada which notes that:

*"To understand these data, users of the information must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%."* Retrieved from Statistics Canada at <https://www12.statcan.gc.ca/census-recensement/2016/dp-pd/prof/about-apropos/about-apropos.cfm?Lang=E&wbdisable=true#aa8>

### Limitations of the Census Data for Smaller Geographies Due to Data Suppression

When working with smaller geographies, it is important to be aware of some of the challenges arising from the practices employed by Statistics Canada in terms of "data suppression". Specifically, in addition to random rounding, area and data suppression has been adopted to further protect the confidentiality of individual respondent's personal information. Area and data suppression results in the deletion of all information for geographic areas with populations below a specified size. For example, areas with a population of less than 40 persons are suppressed. If the community in question has a population of less than 40 persons, only the total population count will be available. The practice of data suppression can also apply to demographic sub-populations. Suppression of data can also occur as a result of poor data quality or other technical reasons.

## OPPORTUNITIES FOR ACTION

### The following are some potential opportunities for action that were identified through the process

1. Address the critical shortage of rental housing (market and non-market)
2. Increase the range of housing choices for individuals and families
3. Increase the range of housing choices for seniors
4. Increase the diversity and mix of housing types
5. Address the needs of vulnerable and 'at risk' priority populations
6. Address the growing homelessness crisis
7. Continue to work to create a shared regional response to housing need

In working to address the housing needs and challenges that have been identified it is important to recognize that an effective housing system enables choice and promotes access to opportunities through building healthy and inclusive communities and a supportive social infrastructure. As well, within the context of Northern B.C. communities, having a diverse range of housing choices is recognized as being integral to supporting a sound economic development strategy. Based on the results of an earlier study of Northern B.C. communities completed by UNBC (2016), it was observed that:

*“housing can either be an enabler or limiting factor for communities in realizing the potential of economic opportunities. If communities lack an adequate supply of suitable housing, they will not be able to retain existing residents or attract new workers and business investment” (UNBC, 2016).*

Taking these factors into consideration, this section sets out some possible strategies or actions for the Village of Hazelton and the other partners in the Upper Skeena region to consider.

#### **Address the critical shortage of rental housing (market and non-market)**

Through this research, it was evident that there is a critical shortage of affordable rental housing in the Upper Skeena region. This includes the need to increase the supply of purpose-built rental housing in the region as well as the need to expand the mix of social housing and non-market choices. As noted through this research, there is only a limited number of non-market housing units available in the region despite significant and on-going demand. A large proportion of the rental housing stock is found in the secondary rental market, which is a less secure, less stable source of rental supply. As well, a larger proportion of the rental housing stock in the Upper Skeena region is older stock that is in need of repairs. To respond to these pressures, it is necessary for the communities in the Upper Skeena region to continue to come together to leverage existing partnerships and relationship to secure additional housing investment to expand the supply of both market and non-market housing stock.

### **Increase the range of housing choices available for individuals and families**

Through the key informant interviews the need for an expanded range of housing choices for families was identified as a priority both in the form of entry-level ownership opportunities as well as rental housing choices. In particular, it was noted that given the supply constraints in the region, it can be difficult to attract and retain key workers and young professionals wishing to move to the region. As well, the concern was raised that the shortage of available opportunities has also meant that young adults living in the region are forced to remain living at home or move away because of the limited housing choices available. To successfully attract and retain key workers to the Upper Skeena region, there is the need to work to ensure that there is an adequate range of housing choices available.

### **Increase the range of housing choices for seniors**

The Upper Skeena region is home to a large and growing population of seniors 65 and older. At the time of the 2016 Census, almost 1 in 3 households living in the Upper Skeena region was led by someone over the age of 65. As well, the population and household growth projections suggest that the number of seniors in the Upper Skeena region is expected to double within the next 10 years (between 2016 and 2026). To meet this increased demand, there is the need to explore strategies to increase the range of housing choices available to seniors. This could include an expanded mix of smaller 1-bedroom and 2-bedroom units as well as more ground-oriented housing that is both adaptable, accessible and that incorporates the principles of universal design. Through the key informant interviews, the observation was also made that there is the need for more supportive seniors' housing and assisted living spaces in the region.

### **Increase the diversity and mix of housing types**

A significant proportion of the housing stock in the Upper Skeena region is in the form of larger single detached homes. Through the community consultation process, there was an interest expressed in exploring different housing types and models including consideration of coach houses, row houses, 4-plex and 6-plex units. There was also community support for exploring different types of mixed income and mixed tenure models including the addition of coach houses, garden suites and other forms of accessory dwelling units as a way of expanding the supply of rental stock.

### **Expand the housing choices available for vulnerable and 'at risk' populations**

The preliminary housing needs assessment report (2019) prepared by the Storytellers' Foundation on behalf of the Skeena Housing Coalition Society documented a diverse range of needs around vulnerable and 'at risk' populations including:

- Housing for vulnerable and 'at risk' youth
- Family housing including housing for single parent family households
- Culturally appropriate housing for Indigenous people
- Housing for people with disabilities (cognitive and physical)
- Housing for women and children fleeing violence
- Housing for low-income seniors and Elders

- Housing for single person households including those receiving income assistance
- Housing for Individuals who are homeless or 'at risk' of becoming homeless

To meet these needs, consideration should be given to the development of targeted strategies including multi-level partnerships both across housing and service providers as well as across all levels of government (Federal, Provincial, regional, local and First Nations) in order to leverage the resources, investments and expertise needed to effectively respond to the needs that have been identified.

#### **Address the growing homelessness "crisis"**

The preliminary housing needs assessment report (2019) prepared for the Skeena Housing Coalition Society observed that the Upper Skeena region does not have any emergency shelter spaces for men, women, youth, or families and that there is a significant and growing need across the Upper Skeena region. It is also worth noting that while the Village of Hazelton had been allowing for a temporary shelter to be put into place, it was always intended to be temporary and was not considered to be suitable or appropriate for longer term arrangements. In 2020, the Upper Skeena Housing Coalition Society completed further research that identified 72 families and individuals from across the Upper Skeena region who are without a place to call home.

#### **Continue to work to create a shared regional response to housing needs**

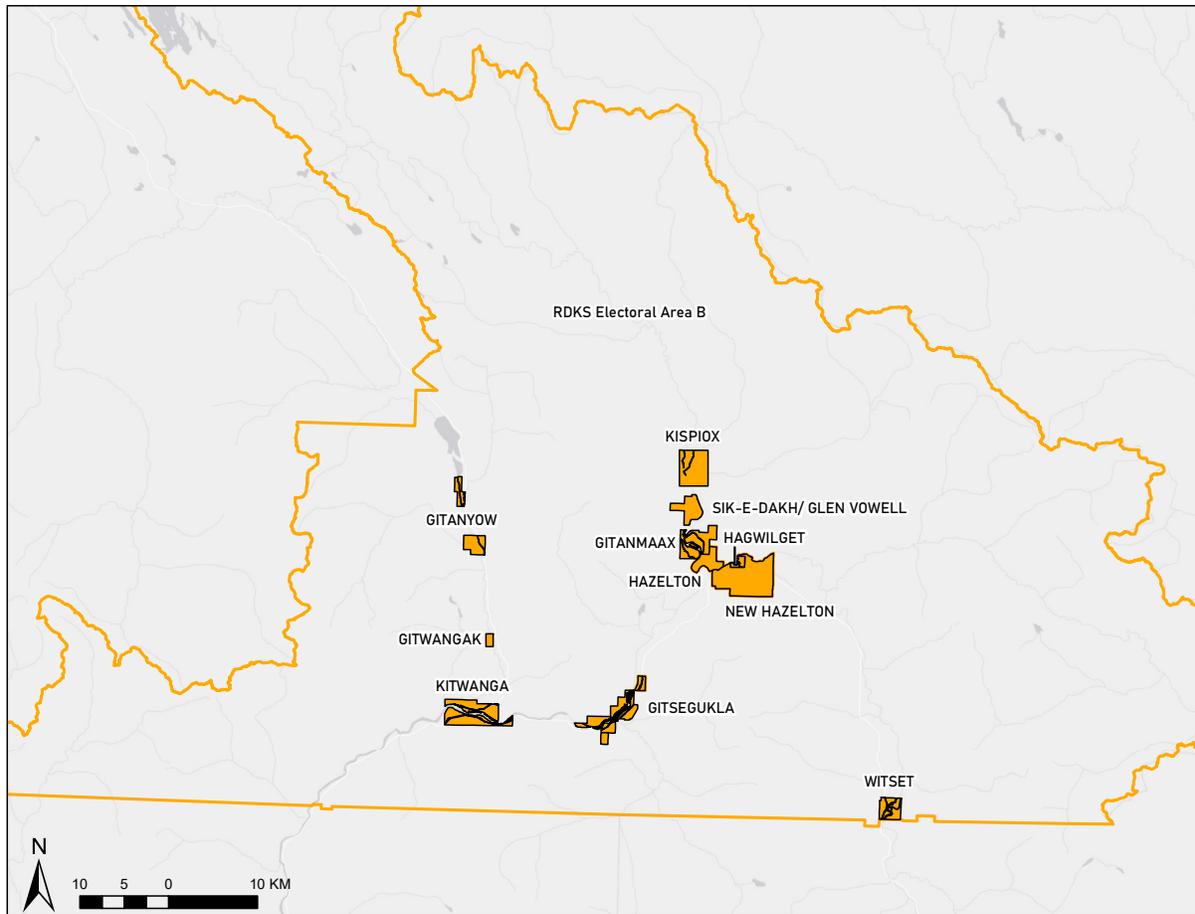

The Skeena Housing Coalition Society was established to bring partners together to create a coordinated multi-agency response to the housing needs in the Upper Skeena region. To work toward this goal, the Skeena Housing Coalition Society is committed to a vision of working together with others to create a collaborative, shared regional response to existing and emerging housing needs through on-going partnerships at the community level and across all levels of government. This commitment to the creation of a shared regional response represents an important part of the solution.

# POPULATION DATA

## 1.0 Population Data

This section provides information on some of the key social, demographic and population-related measures influencing the need for housing in the Village of Hazelton. This includes information on population growth and change as well as information on housing needs across specific population and household groups. Table 1.1 provides some of the key findings related to the Village of Hazelton and some of the key drivers of local housing demand. The darker circles signify some of the population and household related factors that are likely to have a significant impact both positive and negative on existing and emerging housing needs in the Village of Hazelton while the lighter circles signal factors that are likely to have less of an impact.

### 1.1 Population-Related Measures

TABLE 1.1 POPULATION-RELATED MEASURES

<p><b>Local population growth</b> The population in the Village of Hazelton shows significant fluctuation declining by 23 individuals between 2006 and 2011 but growing by 43 individuals between 2011 to 2016.</p>	●
<p><b>Regional population growth</b> The population in the Regional District of Kitimat-Stikine declined by 638 individuals (2%) between 2006 and 2011 and has remained relatively constant between 2011 and 2016.</p>	○
<p><b>Proportion of the regional population</b> The Village of Hazelton accounts for almost 1% of the total population in the Regional District of Kitimat-Stikine.</p>	○
<p><b>Children and youth (0 to 14 years old)</b> There are 55 children and youth living in the Village of Hazelton, accounting for 18% of the total population.</p>	○
<p><b>Youth (15 to 19 years old)</b> There are 25 youth age 15-19 living in the Village of Hazelton, up from 5 in 2011. The Village of Hazelton also has a higher proportion of youth (8%) when compared to the Regional District of Kitimat-Stikine (6%) and the Province as a whole (6%).</p>	○
<p><b>Young adults (20-24 years old)</b> There are 10 young adults age 20-24 living in the Village of Hazelton, the same as in 2011. The Village of Hazelton has a lower proportion of young adults (3%) when compared to the Regional District of Kitimat-Stikine (6%) and the Province as a whole (6%).</p>	●
<p><b>Adults (25 to 64 years old)</b> There are 150 adults between the ages of 25 and 64 living in the Village of Hazelton, up slightly from 145 in 2011. The Village of Hazelton has a lower proportion of adults 25 to 64 (48%) when compared to the Region (55%) and the Province as a whole (55%).</p>	●
<p><b>Seniors (65 years and older)</b> There are 70 seniors 65 years and older living in the Village of Hazelton, up from 55 in 2011. The Village of Hazelton has a higher proportion of seniors (23%) when compared to the Regional District of Kitimat-Stikine (15%) and the Province as a whole (18%).</p>	●
<p><b>Older seniors (85 years and older)</b> In 2016, there were 15 seniors (85 years and older) in the Village of Hazelton. The Village of Hazelton has a higher proportion of seniors 85+ (5%) when compared to the Regional District of Kitimat-Stikine (1%) and to the Province as a whole (2%).</p>	●

## 1.2 Total Population

There were 313 individuals living in the Village of Hazelton at the time of the 2016 Census. This represents approximately 1% of the total population in the Regional District of Kitimat-Stikine.

**TABLE 1.2 TOTAL POPULATION**

	2006	2011	2016

### Notes on Census Rounding and the Implications for Smaller Geographies

There can be some variability in the numbers reported due to random rounding which is an approach which has been adopted by Statistics Canada to ensure confidentiality and that includes randomly rounding either up or down to a multiple of '5' or '10.' To understand these data, users of the information must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%. Additional details are included in Appendix C.

# HOUSEHOLDS

## 2.0 Household Data

This section provides information on the different family and household arrangements across households living in the Village of Hazelton and includes comparative information for the Regional District of Kitimat-Stikine and the Province. Table 2.1 provides some of the key findings related to the Village of Hazelton as it relates to local housing demand. The darker circles signify some of the population and household related factors that are more likely to have an impact on existing and emerging housing needs in the Village of Hazelton while the lighter circles signal those measures which are likely to be less of a concern.

### 2.1 Household-Related Measures

TABLE 2.1 HOUSEHOLD-RELATED MEASURES

<p><b>Households and household growth</b> There were 100<sup>1</sup> households in the Village of Hazelton in 2016, up from 2011.</p>	●
<p><b>Regional household growth</b> The number of households in the Regional District of Kitimat-Stikine grew between 2011 and 2016, going from 14,755 in 2011 to 14,820 in 2016, representing an increase of 65 households.</p>	●
<p><b>Owners</b> There were 60 households in the Village of Hazelton who owned their home in 2016, an increase from 55 households in 2011.</p>	●
<p><b>Ownership Rate</b> The rate of ownership (60%) in the Village of Hazelton is lower than the rate of ownership in the Regional District of Kitimat-Stikine (74%) and the Province as a whole (68%).</p>	●
<p><b>Owners with a mortgage</b> Of the 60 owner households in the Village of Hazelton, 25 had a mortgage (43%), down from 35 households in 2011.</p>	○
<p><b>Renter households</b> There were 35 renter households in the Village of Hazelton in 2016, down from 45 households in 2011.</p>	●
<p><b>Renters living in subsidized housing (Census data)</b> Of the 35 renter households in the Village of Hazelton in 2016, the Census reported 10 households living in subsidized housing.</p>	○
<p><b>Average household size</b> The average household size in the Village of Hazelton is lower than the average household size for households in the Regional District of Kitimat-Stikine (2.5 persons) and the Province (2.4 persons).</p>	●
<p><b>1 person households</b> There were 50 1-person households in the Village of Hazelton in 2016, up from 25 households in 2011 and representing half of all households.</p>	●
<p><b>2 person households</b> There were 20 2-person households in the Village of Hazelton in 2016, down from 40 2-person households in 2011 and representing 22% of all households.</p>	●

<sup>1</sup> The 2016 Census reported 127 households including 60 owners and 35 renters. Custom data purchased by the Province to support the development of Housing Needs Reports shows 100 households including 60 owners and 25 renters. Please note that numbers do not add up to 100 due to random rounding and the challenges related to smaller geographies.

<p><b>Households of 3 or more persons</b></p> <p>There were 20 households of 3 or more persons in the Village of Hazelton in 2016, down from 25 households in 2011. The proportion of larger households in the Village of Hazelton is 20% which is significantly lower than the proportion of larger households in the Regional District of Kitimat-Stikine (38%) and the Province (36%).</p>	
<p><b>Census family households</b></p> <p>There were 50 census family households in the Village of Hazelton in 2016, which represents a decrease from 75 households in 2011. The Village of Hazelton also has a lower proportion of census family households (50%) when compared to the Regional District of Kitimat-Stikine (67%) and the Province (64%).</p>	
<p><b>Families with children</b></p> <p>The majority of Census families living in the Village of Hazelton have children. There were 40 families with children living in the Village of Hazelton in 2016, which represents a small increase from 35 households in 2011. It is also worth noting that the Village of Hazelton has a higher proportion of families with children (40%) when compared to the Regional District of Kitimat-Stikine (38%) but lower than the Province as a whole (56%).</p>	
<p><b>Families without children</b></p> <p>There were 10 families without children living in the Village of Hazelton in 2016, which represents a decrease from 35 households in 2011. It is also worth noting that the Village of Hazelton has a lower proportion of families without children (10%) when compared to the Regional District of Kitimat-Stikine (28%) and the Province as a whole (44%).</p>	
<p><b>Non-family households</b></p> <p>There were 50 non-family households in the Village of Hazelton in 2016, which represents an increase from 25 households in 2011. It is also worth noting that the Village of Hazelton has a higher proportion of non-family households (50%) when compared to the Regional District of Kitimat-Stikine (31%) and the Province (34%).</p>	
<p><b>Non-family households (single person households)</b></p> <p>All of the 50 non-family family households in the Village of Hazelton in 2016 were single person households.</p>	
<p><b>Number of household maintainers</b></p> <p>Of the 100 households in the Village of Hazelton in 2016, 80 (80%) had a single household maintainer while 15 (15%) had 2 or more household maintainers.</p>	

This section provides additional information about the different family and household characteristics of families and individuals living in the Village of Hazelton:

## 2.2 Total Households

There were 100 households living in the Village of Hazelton at the time of the 2016 Census. This represents an increase of 5 households from 2011. The Regional District of Kitimat-Stikine realized an increase of 65 households between 2011 to 2016 with 14,820 households recorded at the time of the 2016 Census.

TABLE 2.2 TOTAL HOUSEHOLDS

# HOUSING CHOICES

## 3.0 Housing Choices

This section includes information on the housing choices available to households living in the Village of Hazelton and includes comparative information for the Regional District of Kitimat-Stikine and the Province as a whole. This section includes information on the different types of housing available to rent or own as well as the different sources of rental supply. This section also includes considerations related to the age of the stock as well as the different types of housing supports available through Provincial housing programs. Table 3.1 provides some of the key findings related to the Village of Hazelton as it relates to local housing demand. The darker circles signify some of the supply-side considerations that can have an impact on existing and emerging housing needs while the lighter circles signal that this may be less of a concern for the Village of Hazelton.

### 3.1 Measures Related to Housing Choices in the Village of Hazelton

TABLE 3.1 MEASURES RELATED TO HOUSING CHOICES IN THE VILLAGE OF HAZELTON

<p><b>Single detached family housing</b> There were 75 households (75%) living in single detached housing in the Village of Hazelton in 2016.</p>	●
<p><b>Semi-detached, duplex, rowhouse and townhouse units</b> There were 20 households (20%) living in semi-detached, duplex, rowhouse and townhouse units in the Village of Hazelton in 2016.</p>	○
<p><b>Apartment stock</b> There were 10 households (10%) living in apartment units in the Village of Hazelton in 2016.</p>	○
<p><b>Apartment duplex units – garden and basement suites</b> There were no households living in duplex units including garden or basement suite in the Village of Hazelton based on the 2016 Census.</p>	●
<p><b>Manufactured home or moveable dwelling</b> There were no households living in a manufactured home or moveable dwelling units in the Village of Hazelton in 2016.</p>	●
<p><b>Purpose-built rental housing</b> Traditional purpose-built rental housing is typically in the form of apartment units. At the time of the 2016 Census, there were 10 purpose-built rental apartment units in the Village of Hazelton.</p>	○
<p><b>Rental units that are part of the secondary rental market</b> Of the 55 renter households living in the Village of Hazelton in 2016, 25 were living in housing in the secondary rental market.</p>	●
<p><b>Bachelor and studio units</b> There were no smaller bachelor and studio units available in the Village of Hazelton in 2016.</p>	●
<p><b>Number of units (1-bedroom units)</b> There were no 1-bedroom units available in the Village of Hazelton, despite the fact that half of all households are single person households in 2016.</p>	●
<p><b>Number of units (2-bedroom units)</b> There were 25 2-bedroom units available in the Village of Hazelton, representing 25% of the housing stock in 2016.</p>	○

<p><b>Number of units (3-bedroom units)</b>  There were 30 3-bedroom units available in the Village of Hazelton in 2016, representing 30% of the housing stock.</p>	<input type="radio"/>
<p><b>Number of units (4+-bedroom units)</b>  There were 35 4-bedroom units available in the Village of Hazelton in 2016, representing 35% of the housing stock.</p>	<input type="radio"/>
<p><b>Age of the stock (period of construction)</b>  A large proportion of the housing stock in the Village of Hazelton is older stock. In 2016, 70% of the housing was built prior to 1980. There has been no new housing built since 2000.</p>	<input checked="" type="radio"/>
<p><b>Access to subsidized housing</b>  BC Housing produces an annual Unit Count Report which shows the total number of households living in subsidized housing or receiving housing assistance across the Province. In March 2020, BC Housing reported that there were 708 individuals in the Kitimat-Stikine region who were receiving some form of housing assistance including 6 units of supportive seniors housing.</p>	<input checked="" type="radio"/>

This section provides additional details about the different housing choices available in the Village of Hazelton.

### 3.2 Single Detached Units

At the time of the 2016 Census, the Village of Hazelton had 75 single detached housing units, a decrease of 5 units between 2011 and 2016. At the same time, the Regional District of Kitimat-Stikine reported a net decrease of 150 single detached units between 2011 and 2016. Between 2011 and 2016, the Province reported a net decrease of more than 11,000 single detached units between 2011 and 2016. In looking at the 2016 Census, 75% of the housing stock in the Village of Hazelton was single-detached compared to 72% in the Regional District of Kitimat-Stikine.

**TABLE 3.2 SINGLE DETACHED HOUSING UNITS**

	2006	2011	2016

#### Notes on Census Rounding and the Implications for Smaller Geographies

There can be some variability in the numbers reported due to random rounding which is an approach which has been adopted by Statistics Canada to ensure confidentiality and that includes randomly rounding either up or down to a multiple of '5' or '10.' To understand these data, users of the information must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%. Additional details are included in Appendix C.

There can be some variability in the numbers reported due to random rounding which is an approach which has been adopted by Statistics Canada to ensure confidentiality and that includes randomly rounding either up or down to a multiple of '5' or '10.' To understand these data, users of the information must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%. Additional details are included in Appendix C. Retrieved from Statistics Canada at <https://www12.statcan.gc.ca/census-recensement/2016/dp-pd/prof/about-apropos/about-apropos.cfm?Lang=E&wbdisable=true#aa8>

### 3.8 Number of Bedrooms

A large proportion of the housing stock in the Village of Hazelton is in the form of larger 2-, 3- or 4-bedroom units while there is a complete lack of supply of smaller 1-bedroom and bachelor units. There were 65 3- and 4-bedroom units accounting for 65% of the total housing stock in the Village of Hazelton in 2016. At the same time, there were 25 2-bedroom units, accounting for 25% of the stock. Across the Regional District of Kitimat-Stikine, there were 10,610 units which were 3 and 4 bedrooms, accounting for 72% of the total housing stock. There were also 980 1-bedroom units across the Regional District of Kitimat-Stikine accounting for 7% of the total stock. Province-wide 55% of the housing stock was in the form of larger 3- and 4- bedroom units while 1-bedroom units accounted for 17% of all units. There were also 514,015 2-bedroom units Province-wide representing 27% of the total stock.

---

1 In 2016, the total number of households in the Village of Hazelton was 100. However, there are also Census sources which suggest that there were 129 households in the Village of Hazelton in 2016. The number of households reported in this table is less than 100 due to Census rounding.

### 3.17 Period of Construction by Tenure (#)

The table below shows the age of the housing stock by tenure for the Village of Hazelton as well as the Regional District of Kitimat-Stikine region and the Province as whole. No units of rental stock have been built in the Village of Hazelton since 2001 compared to 10 units between 1981 and 2000, 15 units between 1961 and 1980 and 15 units prior to 1960. More than half of the ownership stock in the Village of Hazelton was built before 1980 while 38% of the ownership stock was built between 1981 and 2000. No ownership units have been built since 2001.

### 3.20 Tenure Profile of Movers

In looking at the tenure profile of movers, it important to note that movers can include those who were already living in the community or region but who moved to a different address. Of those living in the Village of Hazelton who reported that they had moved in the year prior to the 2016 Census, the majority (74%) were owners while approximately 1 in 5 households (22%) who moved to the community were renters. The general tenure profile of movers is comparable to the general profile of households moving to the broader Regional District of Kitimat-Stikine.

<sup>3</sup> Households receiving assistance under the RAP program receive the difference between the cost of their housing and the amount of rent that they can afford to pay up to a maximum rent ceiling of \$1,067 for a family of 3 and \$1,117 for a family of 4.

<sup>4</sup> Households receiving assistance under the SAFER program receive the difference between the cost of their housing and the amount of rent that they can afford to pay up to a maximum rent ceiling of \$734.

# INCOME PROFILE AND HOUSING COSTS

## 4.0 Income and Housing Cost

Income plays a central role in determining the housing choices available to families and individuals. This section provides information on the housing costs and incomes for households living in the Village of Hazelton as well as provides comparative information for the broader Regional District of Kitimat-Stikine and the Province as a whole. Table 4.1 provides information on the general income and housing cost profile including specific considerations related to housing affordability as well as future housing choices. The darker circles highlight those factors which can affect the mix of housing choices available to families and individuals including housing cost and affordability pressures.

### 4.1 Indicators and Outcomes Related to Housing Costs

TABLE 4.1 KEY HOUSING INDICATORS AND OUTCOMES RELATED TO HOUSING COSTS

<p><b>Median household income</b> In 2016, the median household income in the Village of Hazelton was \$66,504 (2015 incomes) which was \$5,230 (7%) below the median household income for the region.</p>	●
<p><b>Affordability threshold for households in low and very low income</b> Households in low and very low incomes are households with an annual income that is between 30% and 50% of the area median income (AMI) which is typically set at the regional income. Based on the 2016 Census, the median household income for the Regional District of Kitimat-Stikine was \$71,534 which means that the affordability threshold for households with low or very low incomes was between \$21,500 and \$35,500. An affordable rent or housing cost for these households is between \$538 to \$888 per month.</p>	●
<p><b>Affordability threshold for households in low and low to moderate income</b> Households in low and low to moderate incomes are households with an annual income that is between 50% and 80% of the area median income (AMI). Based on the median income of \$71,534 the affordability threshold for a household with low or low to moderate incomes is between \$35,500 and \$57,000. An affordable rent or housing cost for these households is between \$888 to \$1,425 per month.</p>	●
<p><b>Household incomes</b> In 2016, there were 215 households in the Village of Hazelton with an annual income of \$35,000 or less. This represents 1 in 3 households (33%) of households. There were also 60 households living in the Village of Hazelton with an annual income of less than \$20,000</p>	●
<p><b>The cost of ownership</b> Ownership costs in the Village of Hazelton are more affordable when compared to other parts of the Regional District of Kitimat-Stikine. Based on 2016 Census, the average monthly housing cost reported across owners in the Village of Hazelton was \$526 per month.</p>	○
<p><b>The cost of renting</b> Renting in the Village of Hazelton is more affordable when compared to other parts of the Regional District of Kitimat-Stikine. Based on 2016 Census, the average monthly housing cost reported across renters in the Village of Hazelton was \$605 per month.</p>	●

This section provides additional details related to the household incomes and housing costs in the Village of Hazelton:

## 4.2 Average Household Income

At the time of the 2016 Census, the average household income in the Village of Hazelton was not available. However, information on the median household income is available in the table below.

**TABLE 4.2 AVERAGE HOUSEHOLD INCOME**

### Notes on Census Rounding and the Implications for Smaller Geographies

There can be some variability in the numbers reported due to random rounding which is an approach which has been adopted by Statistics Canada to ensure confidentiality and that includes randomly rounding either up or down to a multiple of '5' or '10.' To understand these data, users of the information must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%. Additional details are included in Appendix C.

# HOUSING NEED

## 5.0 Housing Need

This section includes information on the different measures related to housing needs in the Village of Hazelton including considerations related to the adequacy (i.e. the condition of the housing stock), the suitability (i.e. the level of crowding) and affordability (i.e. the number of households spending 30% or more of their income on their housing costs). This section also includes information on the number of households in core housing need including those who are in extreme housing need (i.e. households spending 50% or more of their income on their housing costs). Due in part to the small number of households in the Village of Hazelton, it is likely that many of the results have been suppressed to ensure anonymity.

### 5.1 Key Measures Related to Housing Needs

TABLE 5.1 KEY MEASURES RELATED TO HOUSING NEEDS

<p><b>Households falling below suitability standards (i.e. conditions of crowding)</b> At the time of the 2016 Census, there were no households in the Village of Hazelton who were living in housing that fell below the established suitability standards.</p>	○
<p><b>Households falling below adequacy standards (i.e. condition of the stock)</b> At the time of the 2016 Census, there were no households in the Village of Hazelton who were living in housing that fell below the established adequacy standards.</p>	○
<p><b>Households falling below affordability standards (i.e. shelter-cost-to-income of 30%)</b> At the time of the 2016 Census, there were no households in the Village of Hazelton who were living in housing that fell below the established affordability standards.</p>	○
<p><b>Households in core housing need</b> At the time of the 2016 Census, there were no households in the Village of Hazelton who were in core housing need.</p>	○
<p><b>Households in extreme housing need</b> At the time of the 2016 Census, there were no households in the Village of Hazelton in extreme housing need (meaning households spending 50% or more of their income on their housing costs).</p>	○
<p><b>Individuals experiencing homelessness</b> The Skeena Housing Coalition has recently completed a homeless count for the Upper Skeena region and identified at least 72 individuals without a place to live.</p>	○

#### Notes on Data Suppression for Smaller Geographies in Addition to Random Rounding

In addition to random rounding, area and data suppression has been adopted to further protect the confidentiality of individual respondents' personal information. Area and data suppression results in the deletion of all information for geographic areas with populations below a specified size. For example, areas with a population of less than 40 persons are suppressed. If the community searched has a population of less than 40 persons, only the total population counts will be available. Suppression of data can be due to poor data quality or to other technical reasons. Additional details are included in Appendix C. Retrieved from Statistics Canada at <https://www12.statcan.gc.ca/census-recensement/2016/dp-pd/prof/about-apropos/about-apropos.cfm?Lang=E&wbdisable=true#aa8>

## 5.2 Households Falling Below Suitability Standards

Suitability applies to households that are unable to find housing that is suitable in size based on the needs of their household and Canada's National Occupancy standards. Households that are living below the suitability standard are typically households that are living in over-crowded conditions as a way of reducing their housing costs. At the time of the 2016 Census, there were no households in the Village of Hazelton who were living in housing that fell below the established suitability standard compared to 385 households across the Regional District of Kitimat-Stikine, of which 48% were owner households and 51% were renter households.

### Notes on Data Suppression for Smaller Geographies in Addition to Random Rounding

In addition to random rounding, area and data suppression has been adopted to further protect the confidentiality of individual respondents' personal information. Area and data suppression results in the deletion of all information for geographic areas with populations below a specified size. For example, areas with a population of less than 40 persons are suppressed. If the community searched has a population of less than 40 persons, only the total population counts will be available. Suppression of data can be due to poor data quality or to other technical reasons. Additional details are included in Appendix C. Retrieved from Statistics Canada at <https://www12.statcan.gc.ca/census-recensement/2016/dp-pd/prof/about-apropos/about-apropos.cfm?Lang=E&wbdisable=true#aa8>

### 5.3 Households Falling Below Adequacy Standards

Adequacy applies to households that are unable to find housing that is in good repair that they can afford with the resources that they have available. Households that are living below the adequacy standard are typically households living in older housing stock that is in poor condition and that requires significant repairs or improvements. At the time of the 2016 Census, there were 35 households in the Village of Hazelton who were living in housing that fell below the established adequacy standard, of which 71% were owner households and 29% were renter households. Across the Regional District of Kitimat-Stikine there were 1,360 households (11%) who were living in housing that did not meet the established adequacy standard, of which 68% were owner households and 33% were renter households.

**TABLE 5.3 HOUSEHOLDS FALLING BELOW ADEQUACY STANDARDS**

## 5.4 Households Falling Below Affordability Standards

Affordability applies to households that are unable to find housing in their community that is affordable to their household without spending 30% or more of their income on their housing costs. At the time of the 2016 Census, there were no households in the Village of Hazelton who spent 30% or more of their income on their housing costs. Region-wide, there were 1,620 households living in the Regional District of Kitimat-Stikine who were experiencing affordability challenges. This represents 13% of all households in the region. Of those, 43% were owner households while 57% were renter households.

## 5.5 Households in Core Housing Need

Households in core housing need are households who are unable to find housing that is suitable in size and in good repair without spending 30% or more of their income on their housing cost. At the time of the 2016 Census, there were no households in the Village of Hazelton who were in core housing need. At the same time, across the Regional District of Kitimat-Stikine there were 1,310 households in core housing need (11% of total households in the region). Of those, 37% were owner households while 63% were renter households.

**TABLE 5.5 HOUSEHOLDS IN CORE HOUSING NEED**

## 5.6 Households in Extreme Housing Need

Households in extreme housing need are households who are spending 50% or more of their income on their housing cost. At the time of the 2016 Census, there were no households in the Village of Hazelton who were in extreme housing need. Across the Regional District of Kitimat-Stikine, there were 430 households that were spending 50% or more of their income on their housing costs (4% of all households). Of those, 41% were owner households while 59% were renter households.

### Notes on Data Suppression for Smaller Geographies in Addition to Random Rounding

In addition to random rounding, area and data suppression has been adopted to further protect the confidentiality of individual respondents' personal information. Area and data suppression results in the deletion of all information for geographic areas with populations below a specified size. For example, areas with a population of less than 40 persons are suppressed. If the community searched has a population of less than 40 persons, only the total population counts will be available. Suppression of data can be due to poor data quality or to other technical reasons. Additional details are included in Appendix C. Retrieved from Statistics Canada at <https://www12.statcan.gc.ca/census-recensement/2016/dp-pd/prof/about-apropos/about-apropos.cfm?Lang=E&wbdisable=true#aa8>

## 5.7 Individuals Experiencing Homelessness

Homelessness is a significant and growing issue across many communities in British Columbia. Information contained in the housing and research literature suggests that people who are homeless in rural areas rarely fit the standard definition of homelessness. While some are literally homeless, the majority are living in extremely precarious housing situations or find themselves moving from one overcrowded or barely affordable housing situation to another. There are still others who must rely on family or friends or stay in housing that is in poor condition because that is all they can afford.

The history of colonialism within Canada and the impact of racial and cultural discrimination has contributed to heightened levels of homelessness among Indigenous people, with many Indigenous people continuing to face attitudes of racism and discrimination which negatively affect their access to housing, employment, and other opportunities.

A preliminary housing needs assessment report prepared by the Storytellers' Foundation for the Skeena Housing Coalition Society (2019) observed that the Upper Skeena region does not have any emergency shelter spaces for men, women, youth, or families and that there are not any shelter spaces or drop-in services available during extreme weather events. As well, there is a shortage of transitional, supportive, and second stage housing for women and children fleeing violence.

In 2020, the Skeena Housing Coalition Society completed a homeless count in which 72 individuals in the Upper Skeena region were identified as being homeless. This number is equal to 75% of the number of individuals identified in the City of Terrace at the time of the 2018 Provincial Homeless Count and almost 2.5 times the number of individuals identified in the Town of Smithers.

While a temporary shelter was put in place in the Village of Hazelton to respond to the need, it was always understood that this arrangement was temporary in nature and was not considered to be a suitable arrangement for the longer term. In recent months, there have been preliminary discussions with B.C. Housing about the high level of homelessness in the Upper Skeena region and the depth of needs. Through these conversations and in working in partnerships with local government partners and service providers, the Skeena Housing Coalition Society is hopeful that a lasting solution can be found.

## **Addressing the Needs of Vulnerable and 'At Risk' Populations**

### *Housing for Women and Children Fleeing Violence*

The preliminary housing needs assessment report (2019) prepared by the Storytellers' Foundation for the Skeena Housing Coalition Society identified the need for additional housing and supports for women and children who are experiencing domestic violence including the need for a safe place to stay. Through their research, it was estimated that there are at least 75 people (87% of whom are women) who require short-term safe housing in the region, with at least half of these requiring access to longer term housing solutions. Through the key informant interviews, it was suggested that there have been some preliminary conversations around the creation of new transitional and supportive housing spaces in the District of New Hazelton for women and children fleeing violence. In looking at the level of need in the Upper Skeena region as well as the gaps in the current continuum of housing and supports for vulnerable and 'at risk' women, it is clear that there is the need for this type of housing.\*

### *Housing for Vulnerable and 'At Risk' Youth*

Vulnerable and 'at risk' youth were also identified as an important sector of the community who face significant barriers in finding suitable and appropriate housing in the Upper Skeena region. Based on the preliminary housing needs assessment report (2019) it was noted that the Ministry of Children and Family Development assists clients in finding low-income, affordable rental housing. However, due to the shortage of suitable and appropriate housing choices in the Upper Skeena region, clients are often forced to find housing in other communities. This has compelled youth to travel to the District of Houston (140 km east), the Town of Smithers (70 km east) and the City of Terrace (130 km west) in order to find suitable housing arrangements.

In having to travel these distances, youth are forced to leave their community and support networks including their friends and their families. This experience can be both lonely and isolating for many youth. To address the gap in the continuum of housing choices for vulnerable and 'at risk' youth there is the need for more affordable rental housing in the Upper Skeena region as well as wrap around services. Through the key informant interviews, it was also suggested that culturally responsive approaches should be considered including the possibility of exploring different types of intergenerational models of housing and support.

\* The Province and the District have continued to work to meet the need with a site being identified for a new women's shelter.

# LABOUR MARKET DATA

# 6.0 Labour Market Data

This section provides information on the local and regional economy including key labour market information about the number of individuals in the labour market, the employment and labour market participation rate as well as other information related to workforce housing demand. Table 6.1 highlights some of the labour market related information in the Village of Hazelton and the Regional District of Kitimat-Stikine.

## 6.1 Key Economic Related Indicators and Measures

TABLE 6.1 KEY ECONOMIC RELATED INDICATORS AND MEASURES

<p><b>Changes in the workforce</b> In 2016, the Village of Hazelton had 720 workers, down from 815 in 2011.</p>	●
<p><b>Individuals who are employed</b> In 2016, the Village of Hazelton reported that there were 635 individuals employed, down from 715 employed in 2011. Across the Regional District of Kitimat-Stikine there were 16,670 individuals who were employed, down from 16,135 in 2011.</p>	●
<p><b>Employment rate</b> In 2016, the Village of Hazelton reported an employment rate of 51.2% compared to 55.5% across the region.</p>	●
<p><b>Unemployment rate</b> Between 2011 and 2016, the unemployment rate in the Village of Hazelton decreased from 12.3% to 11.8%.</p>	○
<p><b>Labour market participation rate</b> In 2016, the Village of Hazelton reported a labour market participation rate of 58.1%, down from 62.5% in 2011. This was lower than the corresponding rate in the Regional District of Kitimat-Stikine (64.4%) and the Province (63.9%).</p>	●
<p><b>Commuting patterns</b> In 2016, there were 95 individuals who lived and worked in the Village of Hazelton, representing 13% of the labour force. At the same time, there were 275 individuals who lived in the Village of Hazelton but who traveled to another part of the Regional District of Kitimat-Stikine for work (representing 38.2% of the workforce). There were also 25 individuals who were living in the Village of Hazelton and who were working in a different region (3.5%).</p>	○

## 6.2 Number of Workers

In 2016, the Village of Hazelton reported a total of 115 workers, down from 140 in 2011, a decrease of 25 individuals. Across the Regional District of Kitimat-Stikine region, there were 19,430 workers (up from 18,535 in 2011).

TABLE 6.2 NUMBER OF WORKERS

	2006	2011	2016
British Columbia	2,217,080	2,354,245	2,471,665

Village of Hazelton	195	140	115

Source: Statistics Canada. Census 2006, 2011 and 2016

## 6.3 Number of Individuals Employed

In 2016, the Village of Hazelton reported that there were 105 individuals employed, down from 145 employed in 2011. Across the Regional District of Kitimat-Stikine there were 16,670 individuals who were employed, up from 16,135 in 2011.

TABLE 6.3 NUMBER OF INDIVIDUALS EMPLOYED

	2006	2011	2016
British Columbia	2,084,375	2,171,470	2,305,690
Regional District of Kitimat-Stikine	16,545	16,135	16,670
Village of Hazelton	185	145	105

Source: Statistics Canada. Census 2006, 2011 and 2016

## 6.4 Employment Rate

In 2016, the Village of Hazelton reported an employment rate of 67.3% which was higher than the employment rate of 55.5% seen across the region and the rate reported for the Province (59.6%).

TABLE 6.4 EMPLOYMENT RATE

	2006	2011	2016
British Columbia	61.7	59.5	59.6
Regional District of Kitimat-Stikine	55.8	54.1	55.5
Village of Hazelton	51.5	70.0	67.3

Source: Statistics Canada. Census 2006, 2011 and 2016

## 6.5 Unemployment Rate

In 2016, the Village of Hazelton reported an unemployment rate of 8.7%, lower than the unemployment rate of 13.8% across the Regional District of Kitimat-Stikine. Between 2011 and 2016, the unemployment rate in the Village of Hazelton increased from 0% to 8.7%. Across the broader Regional District of Kitimat-Stikine, between 2011 and 2016, the unemployment rate increased from 12.9% to 13.8%, an increase of 0.9%.

**TABLE 6.5 UNEMPLOYMENT RATE**

	2006	2011	2016

## 6.6 Labour Market Participation Rate

In 2016, the Village of Hazelton reported a labour market participation rate of 63.9% down from 72.5% in 2011. Across the Regional District of Kitimat-Stikine, the labour market participation rate was 64.4% up from 62.2% in 2011. The findings suggest that the labour market participation rate in the Village of Hazelton in 2016 was comparable to the corresponding rate in the Regional District of Kitimat-Stikine and the Province as a whole.

## 6.7 Travel to Work

In 2016, of those employed in the Village of Hazelton, 45 individuals lived and worked in the Village of Hazelton. At the same time, there were 20 individuals who lived in the Village of Hazelton but traveled to another part of the region for work. There were no individuals who travelled to a different region to work. There were also individuals who do not commute to work and/or who travelled to work outside of British Columbia and outside of Canada who are not included in this total.

# POPULATION ESTIMATES

## 7.1 Current and Future Housing Needs

In preparing a *Housing Needs Report*, local governments are required to develop estimates related to:

- Anticipated population and household growth over a 5-year time frame
- Anticipated changes in average and median age
- Changes in the demographic profile of individuals and households
- Estimated future housing demand by housing type, tenure, and bedroom size
- Estimated future demand by affordability (market and non-market)

This report sets out the methodology used to prepare the population and household projections for the Village of Hazelton and includes considerations related to:

- Historical trends and patterns of growth
- Expected growth locally and regionally
- Changes in the social and demographic profile of households living in the Village of Hazelton

## 7.2 Methodology

Statistics Canada, through the Census, provides the most reliable and comprehensive source of baseline and trend data for population and housing demand projections. This includes considerations related to:

- Historical patterns of growth (regional and locally)
- Changes in the general population and age profile of households in the region
- Intra-and inter-provincial migration
- Patterns of housing consumption and current housing demand
- Current housing demand by housing size and type

The process used in preparing the proposed population and household growth projections for the Village of Hazelton included the following steps:

- The creation of a baseline scenario using the 2016 Census data
- Analysis of historical and recent population and household trends
- Consultation with key stakeholders from across the community
- Analysis of expected employment related growth within the region
- An examination of changes in the general population and age profile for the region
- Comparison with the expected population and household growth projections using information available through B.C. Stats (P.E.O.P.L.E. 2020) at the Regional District and Local Health Area level

## 7.3 Estimated Population Growth

Like many other northern communities and regions, the Regional District of Kitimat-Stikine and the Village of Hazelton are subject to significant shifts in population resulting from broader social and economic forces. In 2016, the total population for the Regional District of Kitimat-Stikine was 37,367 individuals, while the population for the Village of Hazelton was 313 individuals accounting for 0.84% of the total population in the RDKS.

In looking at the historical patterns of growth, the Census shows that between 2006 and 2011 the population for the Regional District of Kitimat-Stikine decreased by 638 individuals, representing a negative population growth rate of 1.7%. However, between 2011 and 2016, the population in the Regional District of Kitimat-Stikine increase by a very modest 6 individuals, a 0.0% population growth rate.

Population projections prepared by B.C. Stats through P.E.O.P.L.E. 2020 estimate that between 2016 and 2021 the population in the Regional District of Kitimat-Stikine will increase by 1,468 individuals or a growth rate of 4.0%. This expected rate of growth represents an average annual increase of 294 individuals, or a growth rate of 0.8%.

Between 2021 and 2026, the population in the Regional District of Kitimat-Stikine is expected to increase by an additional 2,065 individuals or a growth rate of 5.2%. This expected rate of growth represents an average annual increase of 413 individuals, or a growth rate of 1.0%.

Between 2006 and 2011, the Village of Hazelton reported a decrease of 23 individuals, or a negative growth rate of 7.8%. This negative growth represents an annual average decrease in the population of 5 individuals.

Between 2011 and 2016, while the entire Regional District of Kitimat-Stikine reported a modest increase in the population of 6 individuals, the Village of Hazelton reported an increase of 43 individuals, or growth of 15.9%.

Significant fluctuations in the population in the Village of Hazelton is consistent with the types of changes experienced across many smaller, northern communities in B.C. and can be a function of the aging of the population and the small size of the population base, as well as the cyclical nature of the local economy.

In using the population and household projections for the RDKS as a general model for understanding future growth and changes within the local context of the Upper Skeena region, the findings suggest that the population for the Village of Hazelton will increase between 2019 and 2021 with an expected increase of 10 individuals, or a growth rate of 3.1%. This represents 2 individuals annually. For 2021 to 2026, the Village of Hazelton is expected to grow by an additional 15 individuals or 4.7% for an average annual increase of 3 individuals per year.

The analysis shows that between 2016 and 2026, the Village of Hazelton will experience a modest period of growth between 2016 and 2026, which is likely to build on the growth experienced between 2011 and 2016.

**TABLE 7.1: PROJECTED POPULATION GROWTH (REGIONAL DISTRICT OF KITIMAT-STIKINE AND VILLAGE OF HAZELTON)**

Years	Regional District of Kitimat-Stikine			Village of Hazelton		
	Population	Population Change	Rate of Growth	Population	Population Change	Rate of Growth
2016	37,367	--	--	313		
2017	38,285	918	2.5%	320	7	2.2%
2018	37,894	(-391)	-1.0%	319	-1	-0.3%
2019	38,003	109	0.3%	316	-2	-0.7%
2020	38,464	461	1.2%	320	3	1.0%
2021	38,835	371	1.0%	323	3	0.9%
2022	39,251	416	1.1%	326	3	1.0%
2023	39,694	443	1.1%	329	3	1.0%
2024	40,133	439	1.1%	332	3	1.0%
2025	40,538	405	1.0%	335	3	0.9%
2026	40,900	362	0.9%	338	3	0.8%

Source: Calculated by SPARC BC based on Local Health Area Projections, B.C. Stats (P.E.O.P.L.E. 2020)

## 7.4 Estimated Household Growth

In 2016, there were 14,820 households living in the Regional District of Kitimat-Stikine including 100 households living in the Village of Hazelton, with the households living in the Village of Hazelton accounting for 0.7% of all households in the Regional District of Kitimat-Stikine.

In looking at the historical patterns of growth, the Census shows that between 2006 and 2011 the total number of households in the Regional District of Kitimat-Stikine increased by 380 households, or a growth rate of 2.6%. Between 2011 and 2016, the total number of households in Regional District of Kitimat-Stikine increased by an additional 65 households, or a rate of growth of 0.4%.

Population and household projections prepared by B.C. Stats under P.E.O.P.L.E. 2020 estimate that between 2016 and 2021 the total number of households in the Regional District of Kitimat-Stikine will increase by 2,319 households, or a growth rate of 14.8%. Annually this represents an average increase of 464 households, or a growth rate of 3.0%.

Between 2021 and 2026, B.C. Stats estimates that the total number of households in the Regional District of Kitimat-Stikine will increase by an additional 1,088 households, or a growth rate of 6.3%. This translates into an average annual increase of 218 households, or a growth rate of 1.3%.

Assuming that the Village of Hazelton experiences a similar pattern of household growth to the expected growth within the Regional District of Kitimat-Stikine as a whole, it is likely that between 2016 and 2021, the total number of households in the Village of Hazelton will increase by 18 households, representing a growth rate of 14.8%. This translates into an average annual increase of 4 households for the Village of Hazelton, or a growth rate of 3.0%.

For 2021 to 2026, assuming that the pattern of household growth within the Village of Hazelton continues to remain similar to the expected household growth for the Regional District of Kitimat-

Stikine as a whole, the total number of households in the Village of Hazelton is expected to increase by an additional 10 households, or a growth rate of 6.3%. This translates into an average annual increase of 2 households, or a growth rate of 1.3%.

**TABLE 7.2: ESTIMATED HOUSEHOLD GROWTH IN VILLAGE OF HAZELTON AND THE REGIONAL DISTRICT OF KITIMAT-STIKINE**

Years	Regional District of Kitimat-Stikine			Village of Hazelton		
	Total Households	Increase/ Decrease	% Change	Total Households	Increase/ Decrease	% Change
2016	14,820			100		
2017	15,424	604	4.1%	104	4	4.1%
2018	16,028	604	3.9%	108	4	3.9%
2019	16,632	604	3.8%	112	4	3.8%
2020	16,906	274	1.6%	116	4	1.6%
2021	17,139	233	1.4%	118	2	1.4%
2022	17,355	216	1.3%	120	2	1.3%
2023	17,578	223	1.3%	122	2	1.3%
2024	17,794	216	1.2%	124	2	1.2%
2025	18,037	243	1.4%	126	2	1.4%
2026	18,227	190	1.1%	128	2	1.1%

Source: Calculated by SPARC BC based on Local Health Area Projections, B.C. Stats (P.E.O.P.L.E. 2020)

## 7.5 Changing Demographics –25 to 64 years of age

In 2016, there were 20,405 individuals in the Regional District of Kitimat-Stikine who were in the 25 to 64 age cohort including 150 individuals living in the Village of Hazelton.

Analysis of historical data for the Regional District of Kitimat-Stikine shows that between 2006 and 2011, the total number of individuals between the ages of 25 to 64 living in the Regional District of Kitimat-Stikine decreased by 390 individuals, a negative growth rate of 1.9%. Between 2011 and 2016, the total number of individuals between the ages of 25 to 64 living in the RDKS decreased by 45, or a negative growth rate of 0.2%.

Between 2006 and 2011, the Village of Hazelton reported a decrease of 10 individuals between the ages of 25 to 64, representing a negative growth rate of 6.5%. Between 2011 and 2016, the Village of Hazelton reported an increase of 5 individuals in the 25 to 64 age cohort, representing a growth rate of 3.4%.

Population projections prepared by B.C. Stats through P.E.O.P.L.E. 2020 estimate that between 2016 and 2021, the population in the 25 to 64 age cohort in the Regional District of Kitimat-Stikine will increase by 784 individuals, representing a growth rate 3.9%. This translates into an average annual increase of 157 individuals in the 25 to 64 age cohort, or a growth rate of 0.8%.

Between 2021 and 2026, B.C. Stats estimates that the population in the 25 to 64 age cohort in the Regional District of Kitimat-Stikine will decrease by 38 individuals, representing a modest negative growth rate of 0.2%. This represents an annual average decrease of 8 individuals in the 25 to 64 age cohort, or a negative growth rate of 0.04%.

While B.C. Stats does not prepare population projections at the community level, population projections at the Local Health Area level can help to provide meaningful insights into differences across different geographic areas.

For 2016 to 2021, assuming that the pattern of growth within the Village of Hazelton is similar to the expected pattern of growth for the Upper Skeena Local Health Area, the population in the Village of Hazelton in the 25 to 64 age cohort is expected to remain effectively unchanged, with a projected decrease of 1 individual. This translates into an average annual change of 0 individuals in the 25 to 64 age cohort, or a growth rate of 0.0% among those between the ages of 25 to 64.

Assuming a similar pattern for 2021 to 2026, it is likely that the population in 25 to 64 age cohort will decrease by 8 individuals, or a negative rate of growth of 5.6%. This translates into an average annual decrease of 2 individuals in the 25 to 64 age cohort, or a negative growth rate of 1.1% among those between the ages of 25 to 64.

**TABLE 7.3: PROJECTED POPULATION GROWTH FOR INDIVIDUALS AGE 25 TO 64 IN VILLAGE OF HAZELTON AND THE REGIONAL DISTRICT OF KITIMAT-STIKINE**

Years	Regional District of Kitimat-Stikine			Village of Hazelton		
	Total Population	Increase/Decrease	% Change	Total Population	Increase/Decrease	% Change
2016	20,405			150

## 7.6 Changing Demographics –65 to 84 years of age

In 2016, there were 5,100 individuals in the Regional District of Kitimat-Stikine who were in the 65 to 84 age cohort including 55 individuals living in the Village of Hazelton.

Analysis of historical data for the Regional District of Kitimat-Stikine shows that between 2006 and 2011, the total number of individuals between the ages of 65 to 84 living in the Regional District of Kitimat-Stikine increased by 705 individuals, a growth rate of 19.5%. Similarly, between 2011 and 2016, the total number of individuals between the ages of 65 to 84 living in the Regional District of Kitimat-Stikine increased by an additional 785, or a growth rate of 18.2%.

Between 2006 and 2011, the Village of Hazelton reported an increase of 25 individuals between the ages of 65 to 84, representing a growth rate of 125.0%, although this high rate is in part due to the small absolute numbers of individuals in this cohort. Between 2011 and 2016, the Village of Hazelton reported an additional increase of 10 individuals in the 65 to 84 age cohort, representing a growth rate of 22.2%.

Population projections prepared by B.C. Stats through P.E.O.P.L.E. 2020 estimate that between 2016 and 2021, the population in the 65 to 84 age cohort in the Regional District of Kitimat-Stikine will increase by 702 individuals, representing a growth rate 13.3%. This translates into an average annual increase of 140 individuals in the 65 to 84 age cohort, or a growth rate of 2.7%.

Between 2021 and 2026, B.C. Stats estimates that the population in the 65 to 84 age cohort in the Regional District of Kitimat-Stikine will increase by an additional 1,611 individuals, representing a growth rate of 25.2%. The expected increase in individuals in the 65 to 84 age cohort translates into an average annual increase of 322, or a growth rate of 5.0%.

While B.C. Stats does not prepare population projections at the community level, population projections at the Local Health Area level can help to provide meaningful insights into differences across different geographic areas.

For 2016 to 2021, assuming that the pattern of growth within the Village of Hazelton is similar to the expected pattern of growth for the Upper Skeena Local Health Area, the population in the Village of Hazelton in the 65 to 84 age cohort is expected to increase by 25 individuals, or a growth rate of 32.6%. This translates into an average annual increase of 5 individuals in the 65 to 84 age cohort, or a growth rate of 6.5% among those between the ages of 65 to 84.

Assuming a similar pattern of growth for the Village of Hazelton for 2021 to 2026, it is likely that the population in 65 to 84 age cohort will increase by an additional 35 individuals, or a growth rate of 34.6%. This translates into an average annual increase of 7 individuals in the 65 to 84 age cohort, or a growth rate of 6.9% among those between the ages of 65 to 84.

**TABLE 7.4: PROJECTED POPULATION GROWTH FOR INDIVIDUALS AGE 65 TO 84 IN THE VILLAGE OF HAZELTON AND THE REGIONAL DISTRICT OF KITIMAT-STIKINE**

Years	Regional District of Kitimat-Stikine			Village of Hazelton		
	Total Population	Increase/ Decrease	% Change	Total Population	Increase/ Decrease	% Change
2016	5,100			55		
2017	4,892	-208	-4.1%	63	8	13.7%
2018	4,960	68	1.4%	71	9	0.2%
2019	5,180	220	4.4%	71	0	6.3%
2020	5,487	307	5.9%	76	4	5.4%
2021	5,802	315	5.7%	80	4	7.0%
2022	6,116	314	5.4%	86	6	11.5%
2023	6,401	285	4.7%	96	10	3.3%
2024	6,770	369	5.8%	99	3	10.1%
2025	7,092	322	4.8%	109	10	5.2%
2026	7,413	321	4.5%	115	6	4.5%

## 7.7 Changing Demographics –85 and older years of age

In 2016, there were 560 individuals in the Regional District of Kitimat-Stikine who were 85 and older including 15 individuals living in the Village of Hazelton.

Analysis of historical data for the Regional District of Kitimat-Stikine shows that between 2006 and 2011, the total number of individuals who were 85 and older living in the RDKS increased by 115 individuals, a growth rate of 46.9%. Similarly, between 2011 and 2016, the total number of individuals 85 and older living in the RDKS increased by an additional 115, or a growth rate of 31.9%.

Between 2006 and 2011, the Village of Hazelton reported no increase in 30 individuals 85 and older. Between 2011 and 2016, the Village of Hazelton reported an additional 5 individuals 85 and older.

Population projections prepared by B.C. Stats through P.E.O.P.L.E. 2020 estimate that between 2016 and 2021, the population 85 and older in the RDKS will increase by 67 individuals, representing a growth rate of 12.0%. This translates into an average annual increase of 13 individuals 85 and older, or a growth rate of 2.4%.

Between 2021 and 2026, B.C. Stats estimates that the population 85 and older living in the RDKS will increase by an additional 115 individuals, representing a growth rate of 18.3%. The expected increase in individuals 85 and older translates into an average annual increase of 23, or a growth rate of 3.7%.

While B.C. Stats does not prepare population projections at the community level, population projections at the Local Health Area level can help to provide meaningful insights into differences across different geographic areas.

For 2016 to 2021, assuming that the pattern of growth within the Village of Hazelton is similar to the expected pattern of growth for the Upper Skeena Local Health Area, the population in the Village of Hazelton 85 and older will increase by just one (1) individual, or a growth rate of 0.2%.

Assuming the Village of Hazelton and the Upper Skeena Local Health Area experience a similar pattern of growth for 2021 to 2026, it is likely that the population 85 and older will increase by an additional 11 individuals, or a growth rate of 53.8%. This translates into an average annual increase of 2 individuals 85 and older, or a growth rate of 10.8% among those 85 and older.

**TABLE 7.5: PROJECTED POPULATION GROWTH FOR INDIVIDUALS IN THE 85+ AGE COHORT IN THE VILLAGE OF HAZELTON & REGIONAL DISTRICT OF KITIMAT-STIKINE**

Years	Regional District of Kitimat-Stikine			Village of Hazelton		
	Total Population	Increase/ Decrease	% Change	Total Population	Increase/ Decrease	% Change
2016	560			15		
2017	637	77	13.8%	18	3	21.0%
2018	660	23	3.6%	22	4	10.7%
2019	650	-10	-1.5%	24	2	-24.1%
2020	616	-34	-5.2%	18	-6	-9.5%
2021	627	11	1.8%	16	-2	14.0%
2022	612	-15	-2.4%	18	2	12.3%
2023	670	58	9.5%	20	2	8.2%
2024	695	25	3.7%	22	2	5.1%
2025	712	17	2.4%	23	1	14.5%
2026	742	30	4%	27	4	13.7%

# APPENDIX A

## Glossary & Definitions

**Affordability:** To be considered affordable, housing cost should be no more than 30% of a household's gross annual income. This measure can also be referred to as STIR which is the shelter-cost-to-income ratio.

**Apartment duplex:** Apartment duplex is a Census term that refers to an apartment or flat in a duplex or accessory dwelling unit in a building that has fewer than 5 storeys.

**Average household income:** Average household income refers to the income of a specified group that is calculated by dividing the aggregate income by the total number of individuals or households identified in the sample or Census universe.

**Band Housing:** Band housing is a Census term that is used for historical reasons to define the shelter occupancy of housing for First Nations people whose form of housing does not lend itself to the usual classification of tenure (ownership and rental).

**Census families:** Census families is a Census term that refers to households living in private households in various types of family and household arrangements. Census families can include spouses who are married as well as common-law spouses and can include households both with and without children.

**Core housing need:** A household is considered to be in core housing need if they are unable to find housing in their community that is suitable in size and in good repair without spending 30% or more of their income on their housing costs.

**Data Suppression:** Data suppression is another tool used by Statistics Canada to protect the confidentiality of respondents and can include the suppression of results for geographic areas with populations below a specified size, in cases where there are concerns about data quality, or for other technical reasons.

**Employment income:** Employment income is the income received from wages, salaries, and commissions and is typically reported at the individual level.

**Full-time employment:** Full-time employment is reported in the Census as a full-year and full-time worker that includes individuals aged 15 and older who worked more than 30 hours per week for a minimum of 49 weeks of the year.

**Household income:** Household income is a Census term that refers to the total household income received from all sources including employment income, investments, pensions, and other sources including government sources. Household income is reported at the household level.

**Household size:** Household size is a Census term that refers to the number of persons in a private household.

**Housing condition:** Housing condition is one of the dimensions of housing need under Canada's Core Housing Need Definition and includes considerations around the adequacy or condition of the housing including the number of units that are in need of major repairs. In particular, a household is considered to be in core housing need if they are unable to find housing that is suitable in size and in good repair without spending 30% or more of their income on their housing costs.

**Household maintainer:** Household maintainer is a Census term that refers to the number of persons in a household and who are responsible for paying the rent, or mortgage, or taxes and other utilities with the age of the primary household maintainer being defined by the first person in the household reported on the Census form and who has been identified as having the primary responsibility.

**Low income measures:** A household is considered to be in low-income if their income falls below one of a number of different measures established by Statistics Canada and can include LIM (low income measure), LICO (low income cut-off) and is measured both before and after tax.

**Low income measure (LIM):** LIM is one of the low-income measures established by Statistics Canada and refers to households falling below 50% of the median adjusted after-tax income of private households (LIM-AT) that is further adjusted to reflect differences in household sizes.

**Median household income:** Median household income refers to the income level of a specified group that is the exact midpoint of the income distribution (i.e. the point where the income distribution divides into two halves).

**Movable dwelling:** Moveable dwelling is a Census term that refers to manufactured or mobile homes that are either rented or owned.

**Movers:** Movers include households who have moved in the year prior to the Census. This can include individuals who have moved but remained in the same city, town or community and who are referred to as non-migrants as well as migrants who could include individuals who have moved from a different city, town, township, village, or First Nations reserve. External migrants would be individuals who have moved from outside of Canada.

**Non-census family households:** Non-census family households is a Census term and refers to individuals or single person households who live alone. Non-census family households can also include unrelated individuals living together.

**Number of bedrooms:** Number of bedrooms is a Census term that refers to the number of rooms in a private dwelling unit that are designated for sleeping purposes while number of rooms refer to additional living spaces within a private dwelling and include other living spaces such as the kitchen, basement, living/dining area.

**Private dwellings:** The term private dwellings is a Census term that refers to living quarters which have a private entrance. A private dwelling occupied by usual residents refers to a private dwelling where the individual or household permanently resides.

**Random Rounding:** Random rounding is an approach adopted by Statistics Canada to ensure confidentiality and protect the privacy of individuals and households in smaller geographies. Random rounding includes adjustments either up or down to a multiple of '5' or '10' and includes adjustments to totals and sub-totals resulting in a situation where the total value (especially in smaller geographies or at the subgroup level) may not match and where percentages may not necessarily add up to 100%.

**Secondary Rental Market:** Typically, there are three sources of rental supply – purpose-built rental housing, social housing and non-market housing stock as well as housing that is available through the secondary rental market. Housing available through the secondary rental market includes rented single detached homes or semi-detached homes as well as rented garden suites or coach house units. It can also include rented condo apartment units as well as rented manufactured home stock.

**Structure type:** The term structure type is a Census term that refers to the structural characteristics of the dwelling unit and could include different housing types including single detached, semi-detached, row house or apartment unit.

**Shelter cost:** Shelter costs refers to the average monthly total of all shelter expenses paid by households that own or rent their dwelling and that can include mortgage payments, property taxes and condominium fees, along with the costs of electricity, heat, water and other municipal services. For renter households, shelter costs include, where applicable, the rent and the costs of electricity, and heat.

**Shelter-cost-to-income ratio (STIR):** The term shelter-cost-to-income ratio refers to the proportion of monthly household income which is spent on shelter costs with the shelter-cost-to-income ratio being calculated for private households who reported a total household income of greater than zero. A household is considered to be experiencing housing affordability challenges if they are spending 30% or more of their income on their housing costs, or if they have a shelter-cost-to-income ratio of 30% or more.

**Subsidized housing:** Subsidized housing refers to housing where a household pays a rent that is geared to their income. Subsidized housing could refer to traditional social housing, public housing, and other forms of government-assisted housing including non-profit housing. This term can also include households that are receiving rent supplement assistance or some form of housing allowance.

**Suitability:** Suitability is one of the dimensions of housing need under Canada's Core Housing Need Definition and includes considerations where there are not enough rooms and living spaces to meet the basic standards requirements set out in the National Occupancy Standards (NOS). Measures of suitability refer to the degree of crowding.

**Tenure:** Tenure is a Census term that is used to determine whether a household rents or owns their housing.

# Appendix B: The Continuum of Housing Choice in the Village of Hazelton

## B.1 The Affordability of Ownership

Using information available through BC Assessment (2019 and 2020), the table below looks at the affordability of ownership across different forms of housing including single detached family housing, duplex units (strata and non-strata) as well as manufactured home or mobile home units. The calculations set out below include information on the down payment requirements, monthly mortgage payments as well as the qualifying income needed to purchase a home in the Village of Hazelton. The information assumes a down payment of 10%, a 25-year amortization period and 5-year fixed term mortgage at 2.39% interest. Assuming that a household was successful in securing the necessary down payment and had only limited other debt, a household could purchase a home in the Village of Hazelton for between \$458<sup>5</sup> and \$912 per month.

**TABLE B.1 MONTHLY MORTGAGE PAYMENTS AND QUALIFYING INCOME**

	Assessed Value	Range Low/High	Mortgage Amount	Down payment Amount	Monthly Payments	Qualifying Income
Single Detached	\$114,900	Low	\$103,410	\$11,490	\$458	\$14,080
Single Detached	\$162,450	High	\$146,205	\$16,245	\$647	\$19,910
Duplex (Non-Strata)	\$138,900	Low	\$125,010	\$13,890	\$553	\$17,020
Duplex (Non-Strata)	\$228,300	High	\$205,470	\$22,830	\$909	\$27,980
Duplex (Strata)	--	Low	--	--	--	--
Duplex (Strata)	--	High	--	--	--	--
Mobile Home	\$158,400	Low	\$142,560	\$15,840	\$631	\$19,410
Mobile Home	\$228,900	High	\$206,010	\$22,890	\$912	\$28,050

*Assumptions: Calculation using the low and high range in the median price reported in BC Assessment Data for the Village of Hazelton and based on an amortization period of 25 years and a 2.39% mortgage rate for 5 years. Calculations assume a 10% down payment*

---

<sup>5</sup> It is possible that the lower value homes are also older homes and that there is the possibility that these homes would require a significant level of investment to bring them up to reasonable standards.

## B.2 Affordability by Housing Type

Based on the median assessed value of \$114,900 and \$162,450 for a single detached home in the Village of Hazelton, a household would need an income of between \$14,080 and \$19,910 and a down payment of between \$11,490 and \$16,245 to purchase a single detached home.

The duplex units in the Village of Hazelton typically have a higher median assessed value as they are newer stock. Based on the median assessed value of \$138,900 and \$228,300 for a duplex unit in the Village of Hazelton, a household would need an annual income of between \$17,020 and \$27,980 and a down payment of between \$13,890 and \$22,830 saved to purchase a newer duplex unit.

Manufactured home stock also represents an important part of the continuum of housing choices in smaller, rural communities. Based on the median assessed values of the manufactured home units in the Village of Hazelton, a household would need an annual income of between \$19,410 and \$28,050 to purchase a manufactured home unit. This would translate into monthly housing costs of between \$631 and \$912 per month not including the monthly pad rental cost.

The housing continuum graphic on the following page shows the mix of housing types (ownership and rental) in the Village of Hazelton and provides information on both housing costs and incomes.

**Column 1 & 2:** Shows the income distribution of all households living in the Village of Hazelton (owners and renters) and is based on the 2016 Census.

**Column 3:** Shows the median price for a single detached home in the Village of Hazelton based on 2019 BC Assessment data. It also shows the qualifying income needed for a household to purchase a home at this price assuming a 10% down payment, a 25-year amortization period, and a 2.39% closed 5-year mortgage.

**Column 4:** Shows the median price for a newer duplex unit in the Village of Hazelton based on 2019 BC Assessment data. It also shows the qualifying income needed for a household to purchase a home at this price assuming a 10% down payment, a 25-year amortization period, and a 2.39% closed 5-year mortgage.

**Column 5:** Shows the median price for a manufactured home in the Village of Hazelton based on 2019 BC Assessment data. It also shows the qualifying income needed for a household to purchase a manufactured home in the Village of Hazelton assuming a 10% down payment, a 25-year amortization period, and a 2.39% closed 5-year mortgage. The calculation also assumes a monthly pad rental cost of \$400 per month.

**Column 6:** Shows the reported average market rent in the Village of Hazelton is \$773 per month based on information contained in the 2016 Census. Based on an average monthly rent of \$773, a household would need an annual income of \$30,919 to carry the cost of this housing.

**Column 7:** Shows the average monthly rent for a household with an annual income of \$20,000 living in social housing where the monthly rent they pay is geared to their income and is based on the standard that to be affordable, a household should not be spending more than 30% of their gross annual income on their housing costs.

TABLE B.2 THE CONTINUUM OF OWNERSHIP AND RENTAL HOUSING CHOICES IN THE VILLAGE OF HAZELTON

Total Households: 100						
Total Owners: 60 <sup>1</sup>						Renters: 35
Income Distribution (\$)	Number of Households	Single Detached Housing	Duplex Units. (Newer Stock)	Duplex Units. (Older Stock)	Market Rental	Non-Market Seniors (6 units)
<b>Total</b>	100					
\$125K+	10					
\$100K to 124,999	15					
\$80K to 99,999	15					
\$60K to 79,999	20					
\$50K to 59,999	10					
\$40K to 49,999	10					
\$30K to 39,999	10				\$30,919	
\$20K to 29,999	5		\$27,980			
\$15K to 19,999	0	\$19,910		\$17,020		
\$10K to 14,999	5					
Under \$10K	0					
<b>Housing Cost</b>		\$162,450 \$647/month	\$258,300 \$909/month	\$138,900 \$553 /month	\$773 per month	\$500 per month

<sup>1</sup> The 2016 Census reported 127 households including 60 owners and 35 renters. Custom data purchased by the Province to support the development of Housing Needs Reports shows 100 households including 60 owners and 25 renters. Please note that numbers do not add up to 100 due to random rounding and the challenges related to smaller geographies.

# Appendix C

## C.1 The Limitations of the Use of Census Data in Smaller Geographic Areas

This section describes some of the limitations of the use of Census data for smaller geographies with specific focus on the implications of the use of “random rounding” and “data suppression”:

### **Notes on Random Rounding**

In using Census data, it is important to recognize that there can be some variability in the numbers reported due to random rounding - an approach adopted by Statistics Canada to ensure confidentiality and that includes randomly rounding either up or down to a multiple of '5' or '10.' As noted by Statistics Canada:

*"To understand these data, users of the information must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%"* Retrieved from Statistics Canada at <https://www12.statcan.gc.ca/census-recensement/2016/dp-pd/prof/about-apropos/about-apropos.cfm?Lang=E&wbdisable=true#aa8>

### **Small Area Data Suppression**

In addition to random rounding, small area data suppression has been adopted to further protect the confidentiality of individual respondents' personal information. Area and data suppression results in the deletion of all information for geographic areas with populations below a specified size or for specific sub-population groups. For example, areas with a population of less than 40 persons are suppressed. If the community searched has a population of less than 40 persons, only the total population counts will be available. Suppression of data can also occur due to poor data quality or to other technical reasons.

### **Additional information on data quality and disclosure control**

For information on data quality, as well as random rounding, data suppression, and other methods of disclosure control, please consult the Guide to the Census of Population, 2016, Catalogue no. 98-304-X, and the reference guides for the individual topics.

## C.2 Notes on Random Rounding and Data Suppression

This section provides additional technical details around the limitations of Census data especially in smaller geographic areas. In looking at the information provided by Statistics Canada it is important to note that there can be some variability in the numbers reported due to random rounding - an approach adopted by Statistics Canada to ensure confidentiality and that includes randomly rounding either up or down to a multiple of '5' or '10.'

As noted by Statistics Canada:

*"To understand these data, users of the information must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%"*

Retrieved from Statistics Canada at <https://www12.statcan.gc.ca/census-recensement/2016/dp-pd/prof/about-apropos/about-apropos.cfm?Lang=E&wbdisable=true#aa8>

## C.3 Area and data suppression

In addition to random rounding, area and data suppression has been adopted to further protect the confidentiality of individual respondents' personal information. Area and data suppression results in the deletion of all information for geographic areas with populations below a specified size. For example, areas with a population of less than 40 persons are suppressed. If the community searched has a population of less than 40 persons, only the total population counts will be available. Suppression of data can be due to poor data quality or to other technical reasons.

## C.4 Random rounding

To ensure confidentiality, the values, including totals, are randomly rounded either up or down to a multiple of '5' or '10.' To understand these data, you must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%.

## C.5 Note on data quality and disclosure control

For information on data quality, as well as random rounding, data suppression, and other methods of disclosure control, please consult the [Guide to the Census of Population, 2016, Catalogue no. 98-304-X](#), and the reference guides for the individual topics.
