Grid bearings are derived from differential carrier phase GNSS observations and are referred to the central meridian of UTM Zone 9 North.

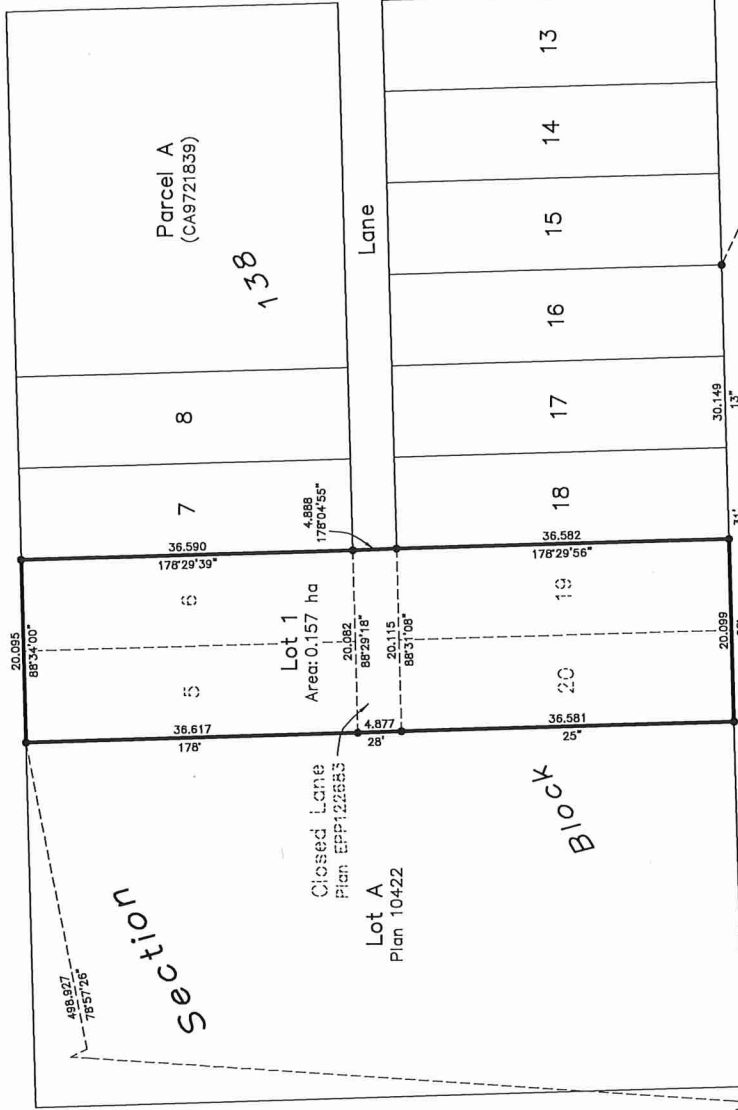

The UTM coordinates and estimated absolute accuracy achieved are derived from 8 hours of GNSS dual frequency observations processed using the Precise Point Positioning (PPP) service provided by Natural Resources Canada.

This plan shows horizontal ground level distances, unless otherwise specified. To compute grid distances, multiply ground level distances by the average combined factor of 0.9996495. The average combined factor has been determined based on an ellipsoidal elevation of 318 metres.
